---

I got these during the meeting from BP. They have personal IDs in them.  
They want us think about how to integrate into the community monitoring system.  
Any thoughts or ideas from you or Mark on how to handle this PIV data for followup and tracking?

---

Maureen,  
Since the topic of health complaints from the public was raised on the call a few minutes ago, I wanted to let you know that there is an ongoing effort to collect "illness and odor" data from our call centers. This is the one of several notes which batches of e-mails. I get daily updates from John Lane, who as stated in one of the notes attached, can send the data to "anyone that needs it".

Please let all of the addressees know how you would like to handle the data we already have, and the data as they continue to come in.

Kevin,  
I have enclosed several of the reports in this single e-mail. It's just easier that way.

I will have the appropriate field to the database. As for sending this report to any other group, I have not been requested to do so. I can send it to anyone that needs it, will just need the email information.

Thanks  
John

John,

Thanks for the report. As I stated in the previous emails, we can only respond to an odor incident which provides a location address. Could you please modify the spreadsheet to include an address going forward?

Also, have you been requested to provide this report to anyone in the EPA in Louisiana or Texas?

Thanks,

Adam Davis
